

TV White Space Projects
National Association of Media & Technology Centers
SHARED CONVERSATION

In 2010, the FCC made the unused TV channels between the active ones in VHF and UHF available for community broadband Internet access. Unlike traditional Wi-Fi or line of sight wireless technologies, "White Space" can cover an area of approximately 62 miles!

On March 13, 2018, a panel of Educational Service Agency staff led by Ron Cone (NE) will talk about how one ESU has used this technology to provide homework hotspots in and around their service area. With digital equity and broadband access coming to the forefront in education, learn how "White Space" can help your agency help bridge the equity gap.

Led by Doreen Bergman (NY) and ESU 10 (NE), we will discuss the evolution of Whitespace and its impact on education.

NAMTC offers FREE virtual professional development opportunities for members and non-members.

Date: March 13, 2018

Time: 3:00 p.m. Eastern, 2:00 p.m. Central
